- What is Web Services
- Types of Web Services
- Hosting a Web Services
- Security
A web service is any piece of software that makes itself available over the internet and uses a standardized XML messaging system. XML is used to encode all communications to a web service.
One example could be flight schedules and ticket reservation systems. Files with the WSDL extension contain web service interfaces expressed in the Web Service Description Language (WSDL).
Web Service

- XML-based protocol
- SOAP (Simple Object Access Protocol)
- WSDL (Web Services Description Language)
- UDDI (Universal Description, Discovery, and Integration)
Types of Web Hosting Services

- Builders
- Shared Hosting
- Dedicated Hosting
- Collocated Hosting
Security

- Confidentiality
- Authentication
- Network Security
