

# MIS IN Education Sector

Dr. Ramlal Porika

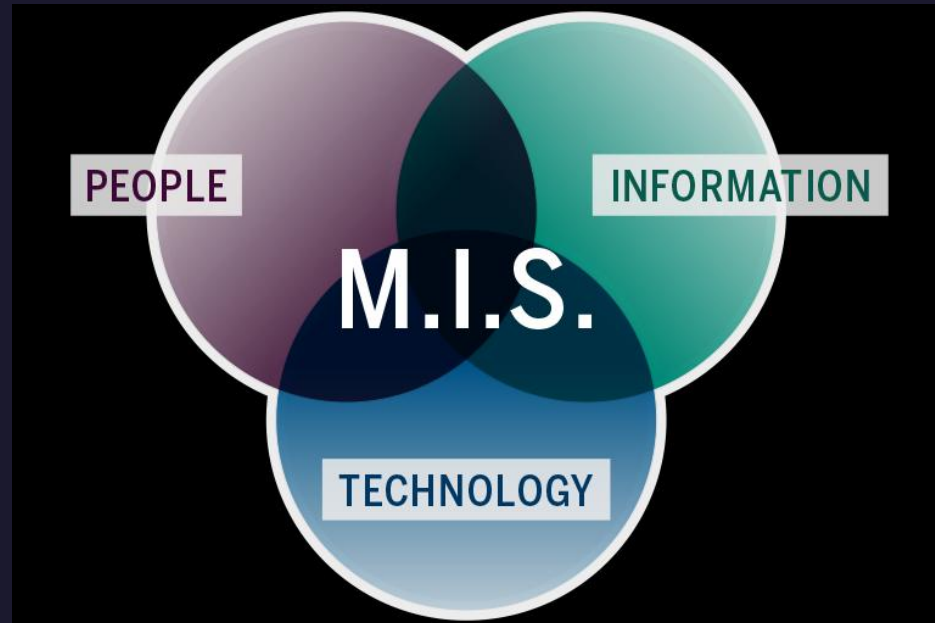

Associate Professor, SOM

NIT Warangal

## WHAT IS MIS

MIS (management information systems) is the department controlling hardware and software systems used for business-critical decision-making within an enterprise. These systems were business-critical, meaning a business would fail if it had to go back to manual accounting.

## WHAT IS EDUCATION MIS

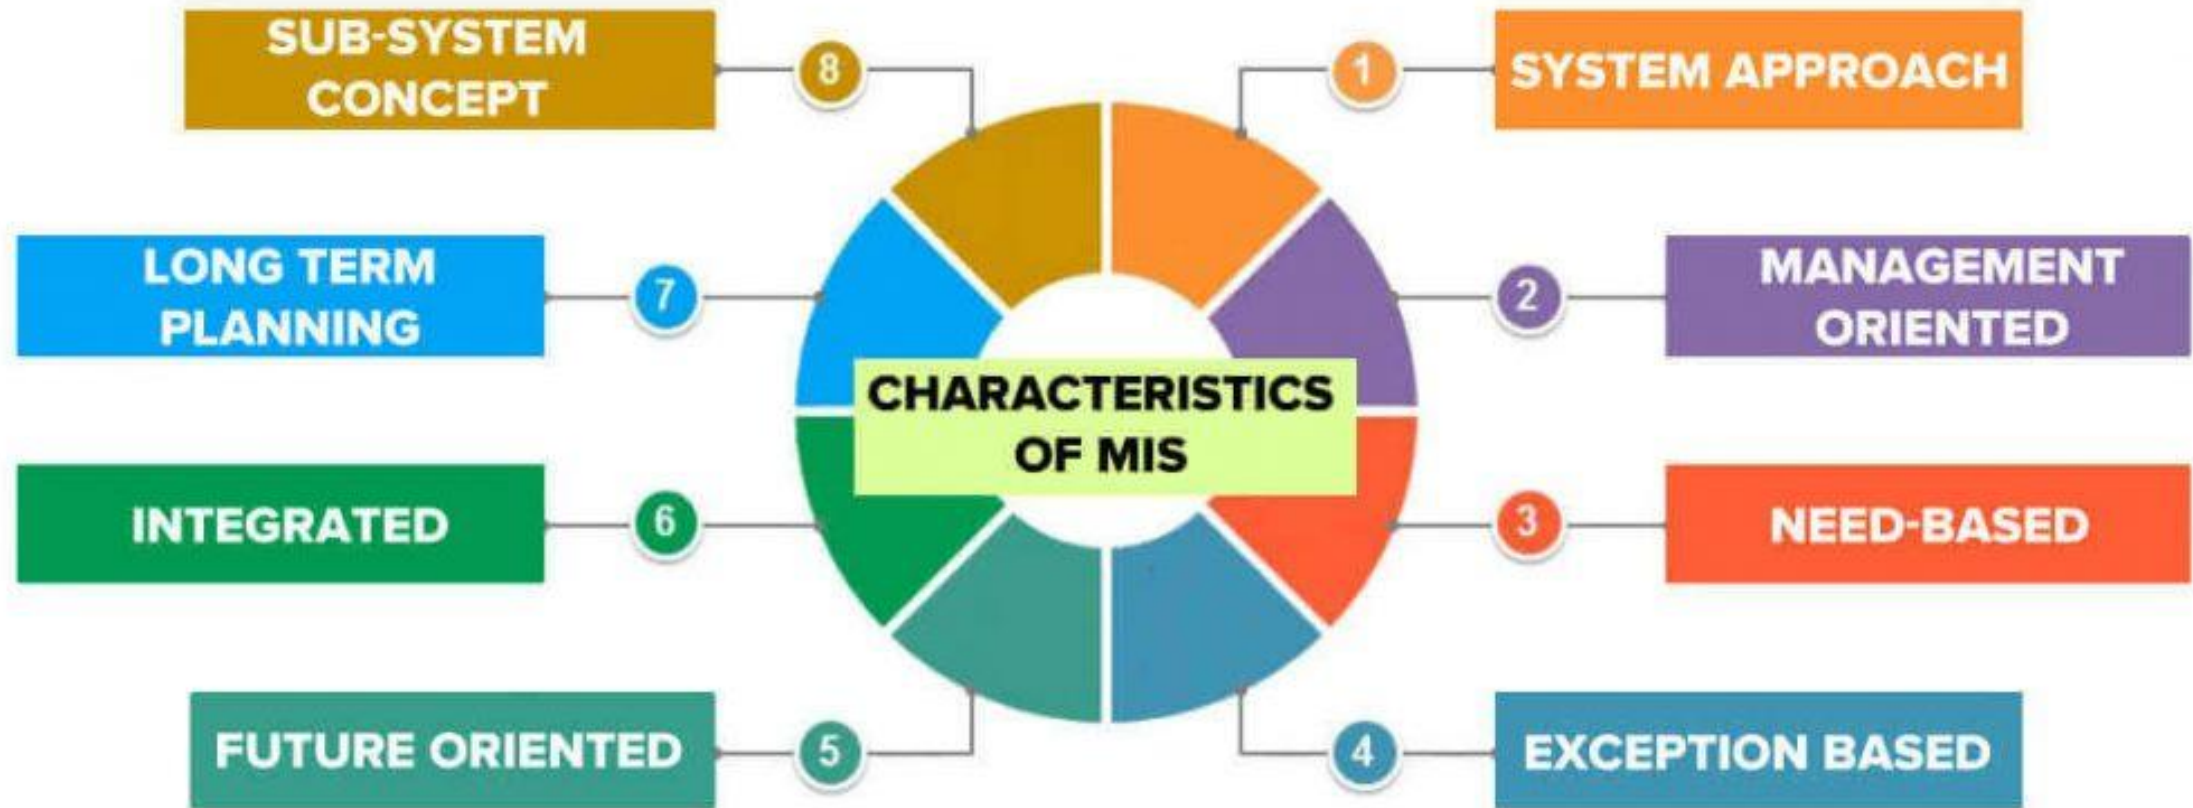

Education Management Information System (EMIS) is a system that monitors the performance of education programs offered by the institute and manages the distribution and allocation of educational resources. It manages, plans, and strategize to implement work processes to execute education system smoothly. Of course, in the field of education, education MIS has specific roles to help an educational institution grow.

Nowadays many higher education institutions are looking forward to implementing comprehensive education management solutions to align academic processes and deliver a better student experience

## PURPOSE OF MIS IN COLLEGES, UNIVERSITIES

In the initial stages of its development, management information systems (**MIS**) **main purpose** and usage was to improve the efficiency of university office activities. It was used to store student and personnel data. The most concern was being focused on data entry and collation, rather than upon data transfer or analysis.

# CHARACTERISTICS OF MIS

# STUDENT INFORMATION SYSTEM

# UNIVERSITY INFORMATION SYSTEM

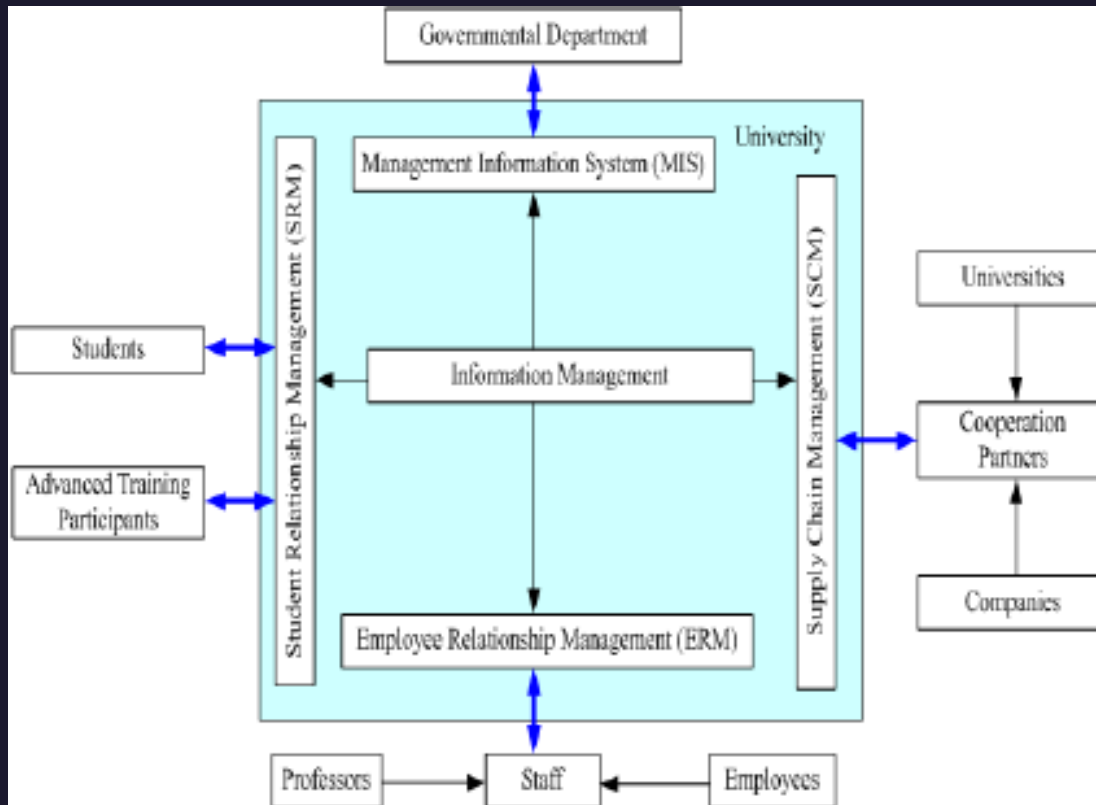

Figure represents the relevant user classes. According to customer relationship management (CRM), we use the term student relationship management (SRM) or employee relationship management (ERM) because of many similarities with CRM. Besides, there are interfaces outside the university, e.g., with cooperation partners, companies offering jobs and internships. In those cases the exchange of services is bilateral. A management information system (MIS) needs data in an integrated and aggregated manner for decision makers, university management and supervisory authorities. Data are exchanged among all components of such a system (Information Management), which requires a suitable infrastructure
